25X1

Attention:

Reference:

Subject: Thirty-Fourth Monthly Report

Gentlemen:

Enclosed are five (5) copies of the thirty-fourth Monthly Letter Report covering the period of April 1, 1967, to April 30, 1967, in accordance with the referenced contract.

Yours truly,

INFORMATION SYSTEMS
MARKETING AND PLANNING DEPARTMENT

CONTACT DUPLICATING AND RESEAU PRINTER
AND
HIGH RESOLUTION STEP AND REPEAT PRINTER
THIRTY-FOURTH MONTHLY LETTER REPORT
May 10, 1967

Period: April 1, 1967 to April 30, 1967

25X1

TABLE OF CONTENTS

<u>Section No.</u>	<u>Page No.</u>
1.0 <u>Contact Duplicating & Reseau Printer</u>	
1.1 Purpose.....	1
1.2 Activity of this Report Period...	1
1.3 Plans for Next Period.....	2
1.4 Problems	2
1.5 Documentation	2
1.6 Questions Outstanding	2
2.0 <u>High Resolution Step & Repeat Printer</u>	
2.1 Purpose	2
2.2 Activity of this Report Period ..	3

1.0 CONTACT DUPLICATING AND RESEAU PRINTER

1.1 Purpose

The overall objective of the current contract is the design, fabrication, test and delivery of a photographic step and repeat Contact Duplicating and Reseau Printer. Prime design goals are high-speed automatic operation, variable format capability, and high resolution with minimum film distortion or damage. The delivered equipment will be suitable for operational use. The printer will accommodate films of 70mm to 9½" width with frame lengths up to 30 inches and will provide operation in the Reseau mode and selective mode as options.

1.2 Activity of this Report Period

A meeting was held on April 5, 1967 with the customer to demonstrate the results of a series of tests designed to measure circuit stability, exposure uniformity in Manual and Automatic modes, and limiting parameters of the Automatic Exposure Control System.

By means of inspecting a series of 9½" x 30" processed exposures, stability and uniformity were established. The limiting conditions of the Automatic Exposure Control system were determined by simulated imagery involving squares of various sizes and densities superimposed upon various background densities.

Demonstration was also made of the system capability for contrast enhancement and density compression using "typical" imagery.

Resolution of more than 300 lpm was demonstrated with the Mylar interlayer installed in the printer.

Following the Test Demonstration, proposals were requested by the customer for further improving printer performance and reliability. Proposals were submitted verbally on April 7, 1967 to modify the lamp/photocell circuitry for improved stability and reliability, and to modify the photocell aperture plate for increased photocell current which will permit greater latitude of input density.

The Pre-View and Punch Station has been received from the sub-contractor and made operational. A number of improvements have been incorporated to improve scope illumination, ease of operation, and to simplify calibration procedures.

Preliminary tests have been made using a dummy aperture plate with reflective inserts having various hole tapers. A substantial increase in photocell current has been proven which will extend the latitude of input densities which can be tolerated by the lamp/photocell circuitry.

1.3 Plans for Next Report Period

Finalize chart for Film Metering System and test using Frame Sensing Detector.

Make further resolution tests using target supplied by customer.

Complete updating of Operations Manual

1.4 Problems

None

1.5 Documentation

Formal proposals have been submitted for the requested modifications.

1.6 Questions Outstanding

Plans for the next report period are dependent upon receiving approval from the customer regarding the proposed modifications. A decision on whether to complete the printer for shipment or initiate modifications is awaited.

2.0 High Resolution Step and Repeat Printer

2.1 Purpose

The purpose of this effort is to design, fabricate, test and deliver in twenty months a high precision step and repeat, photographic contact printer. This printer will be capable of producing photographic contact prints of the highest possible quality, resolution, and acutance from roll film of widths varying from 70mm to 9½" and in pre-selected frame lengths from 5 inches up to a maximum of 30 inches.

2.2 Activity of this Report Period

There was no activity this month. The Stop-work period expired 11 January 66. is still awaiting Government direction.
